Wallglass System Collection

Enter the fascinating world of glass, raw material whose first appearance in the world is lost in myth. Refined, limpid and light, it's able to create seductive and highly personalised atmosphere.

POM Glass is the result of the evolutionary path of glass: from the U-Glass used mainly in the '60s and '70s, we moved on to the use of glass blocks in the '80s. Semitransparent types of glass born for the outdoors were gradually applied indoors by top architects and designers. Today this innovative solution aims to become a new, elegant tool for modern designers.

LIGHT AND SHADOW

Brightness of the spaces, transparencies, light games, even the intimacy created by the shadows, support and match with the rhythms of our every day life.

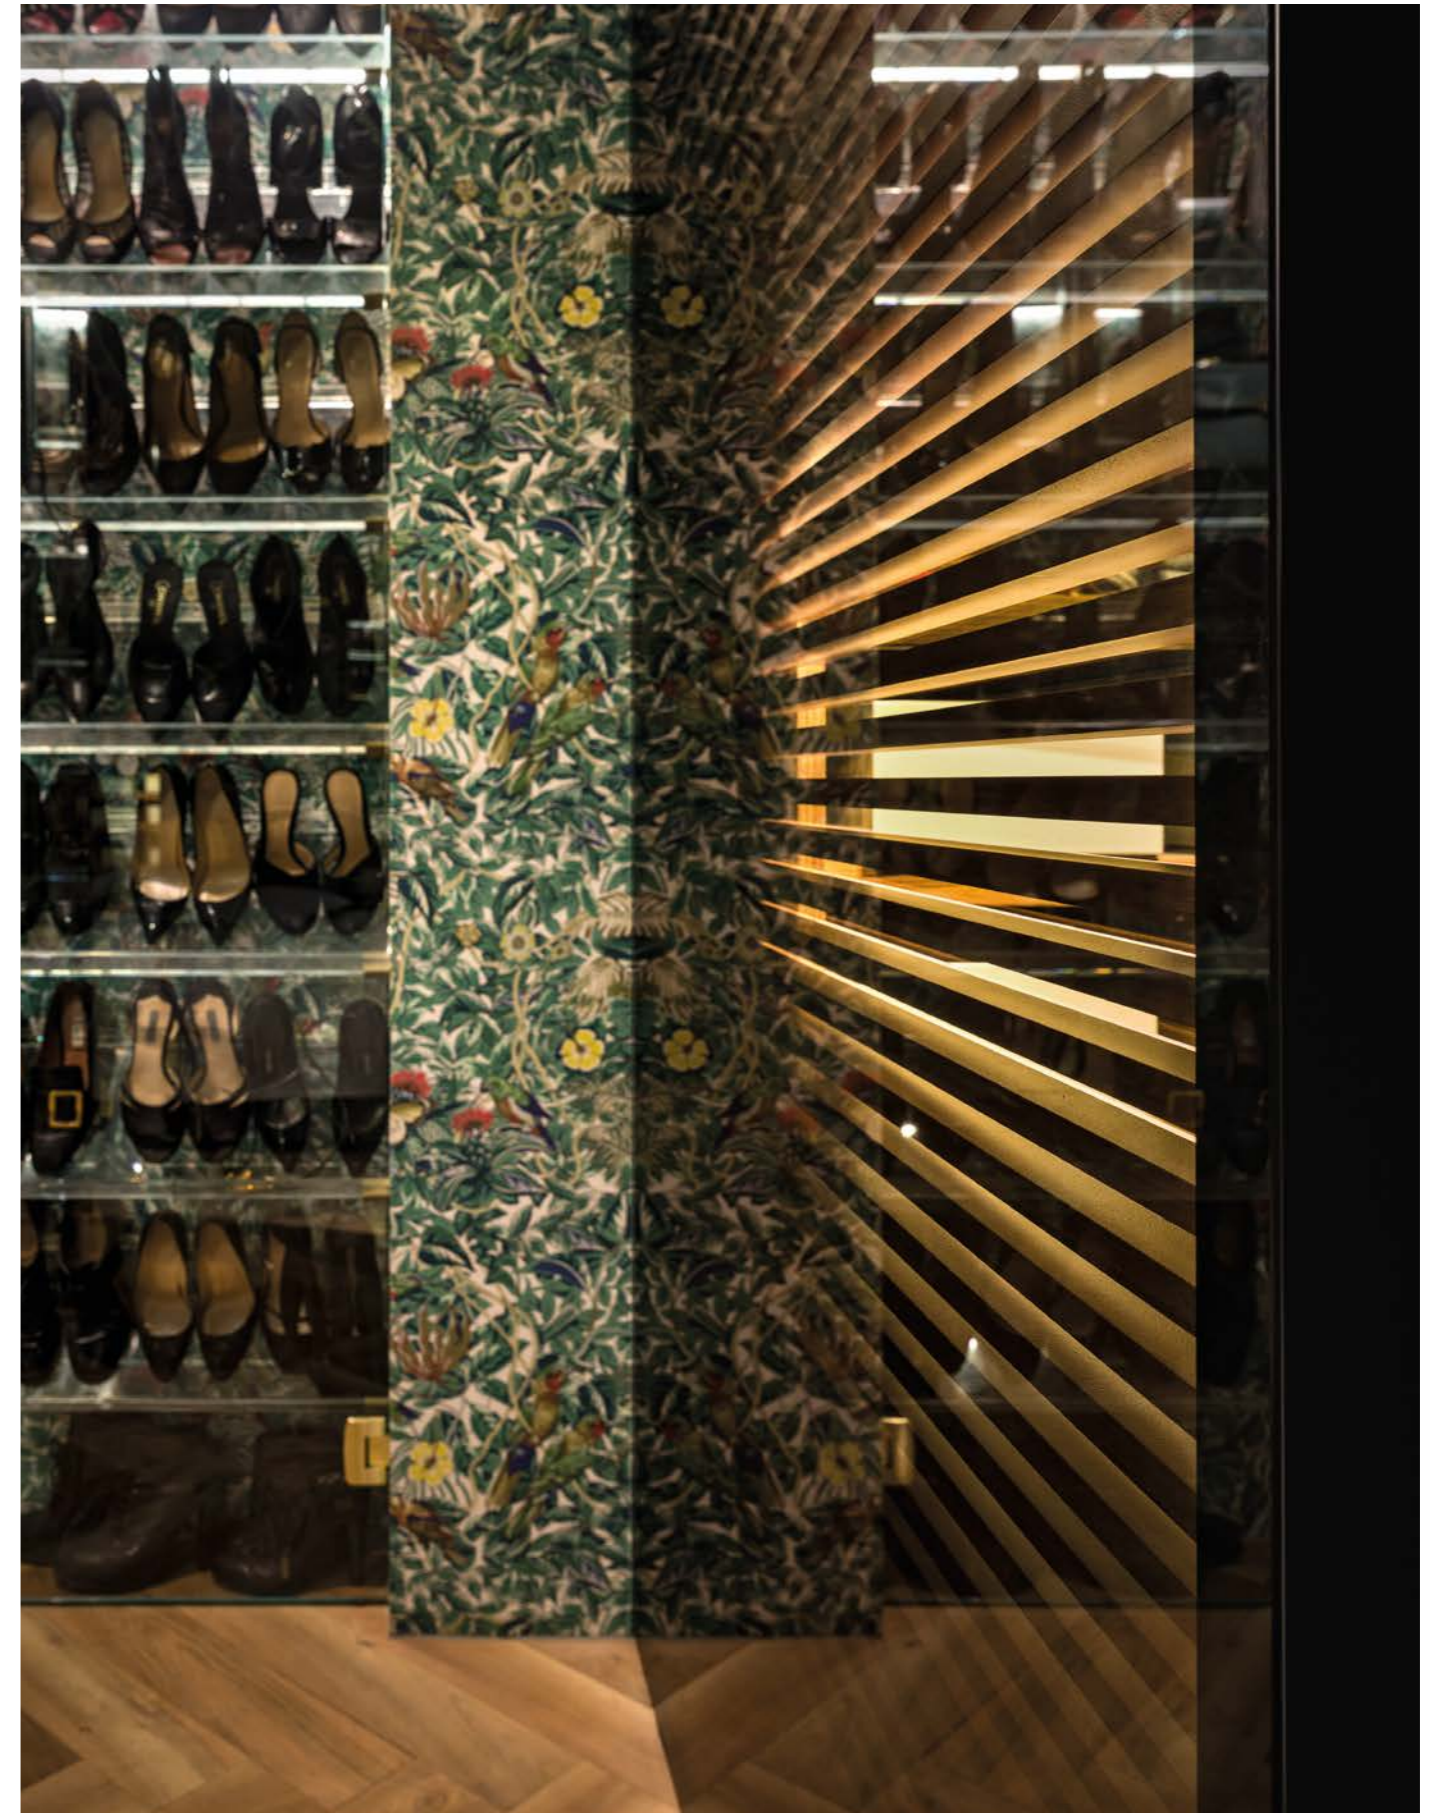

Design & Elegance

POM Glass was born from the meeting between creativity and contemporaneity. It represents a new vision of materials and spaces, a contemporary evolution of applied design. The development of new techniques and the study of innovative materials led the use of glass to its highest expression. Hence the fusion with wood, original element of the living culture.

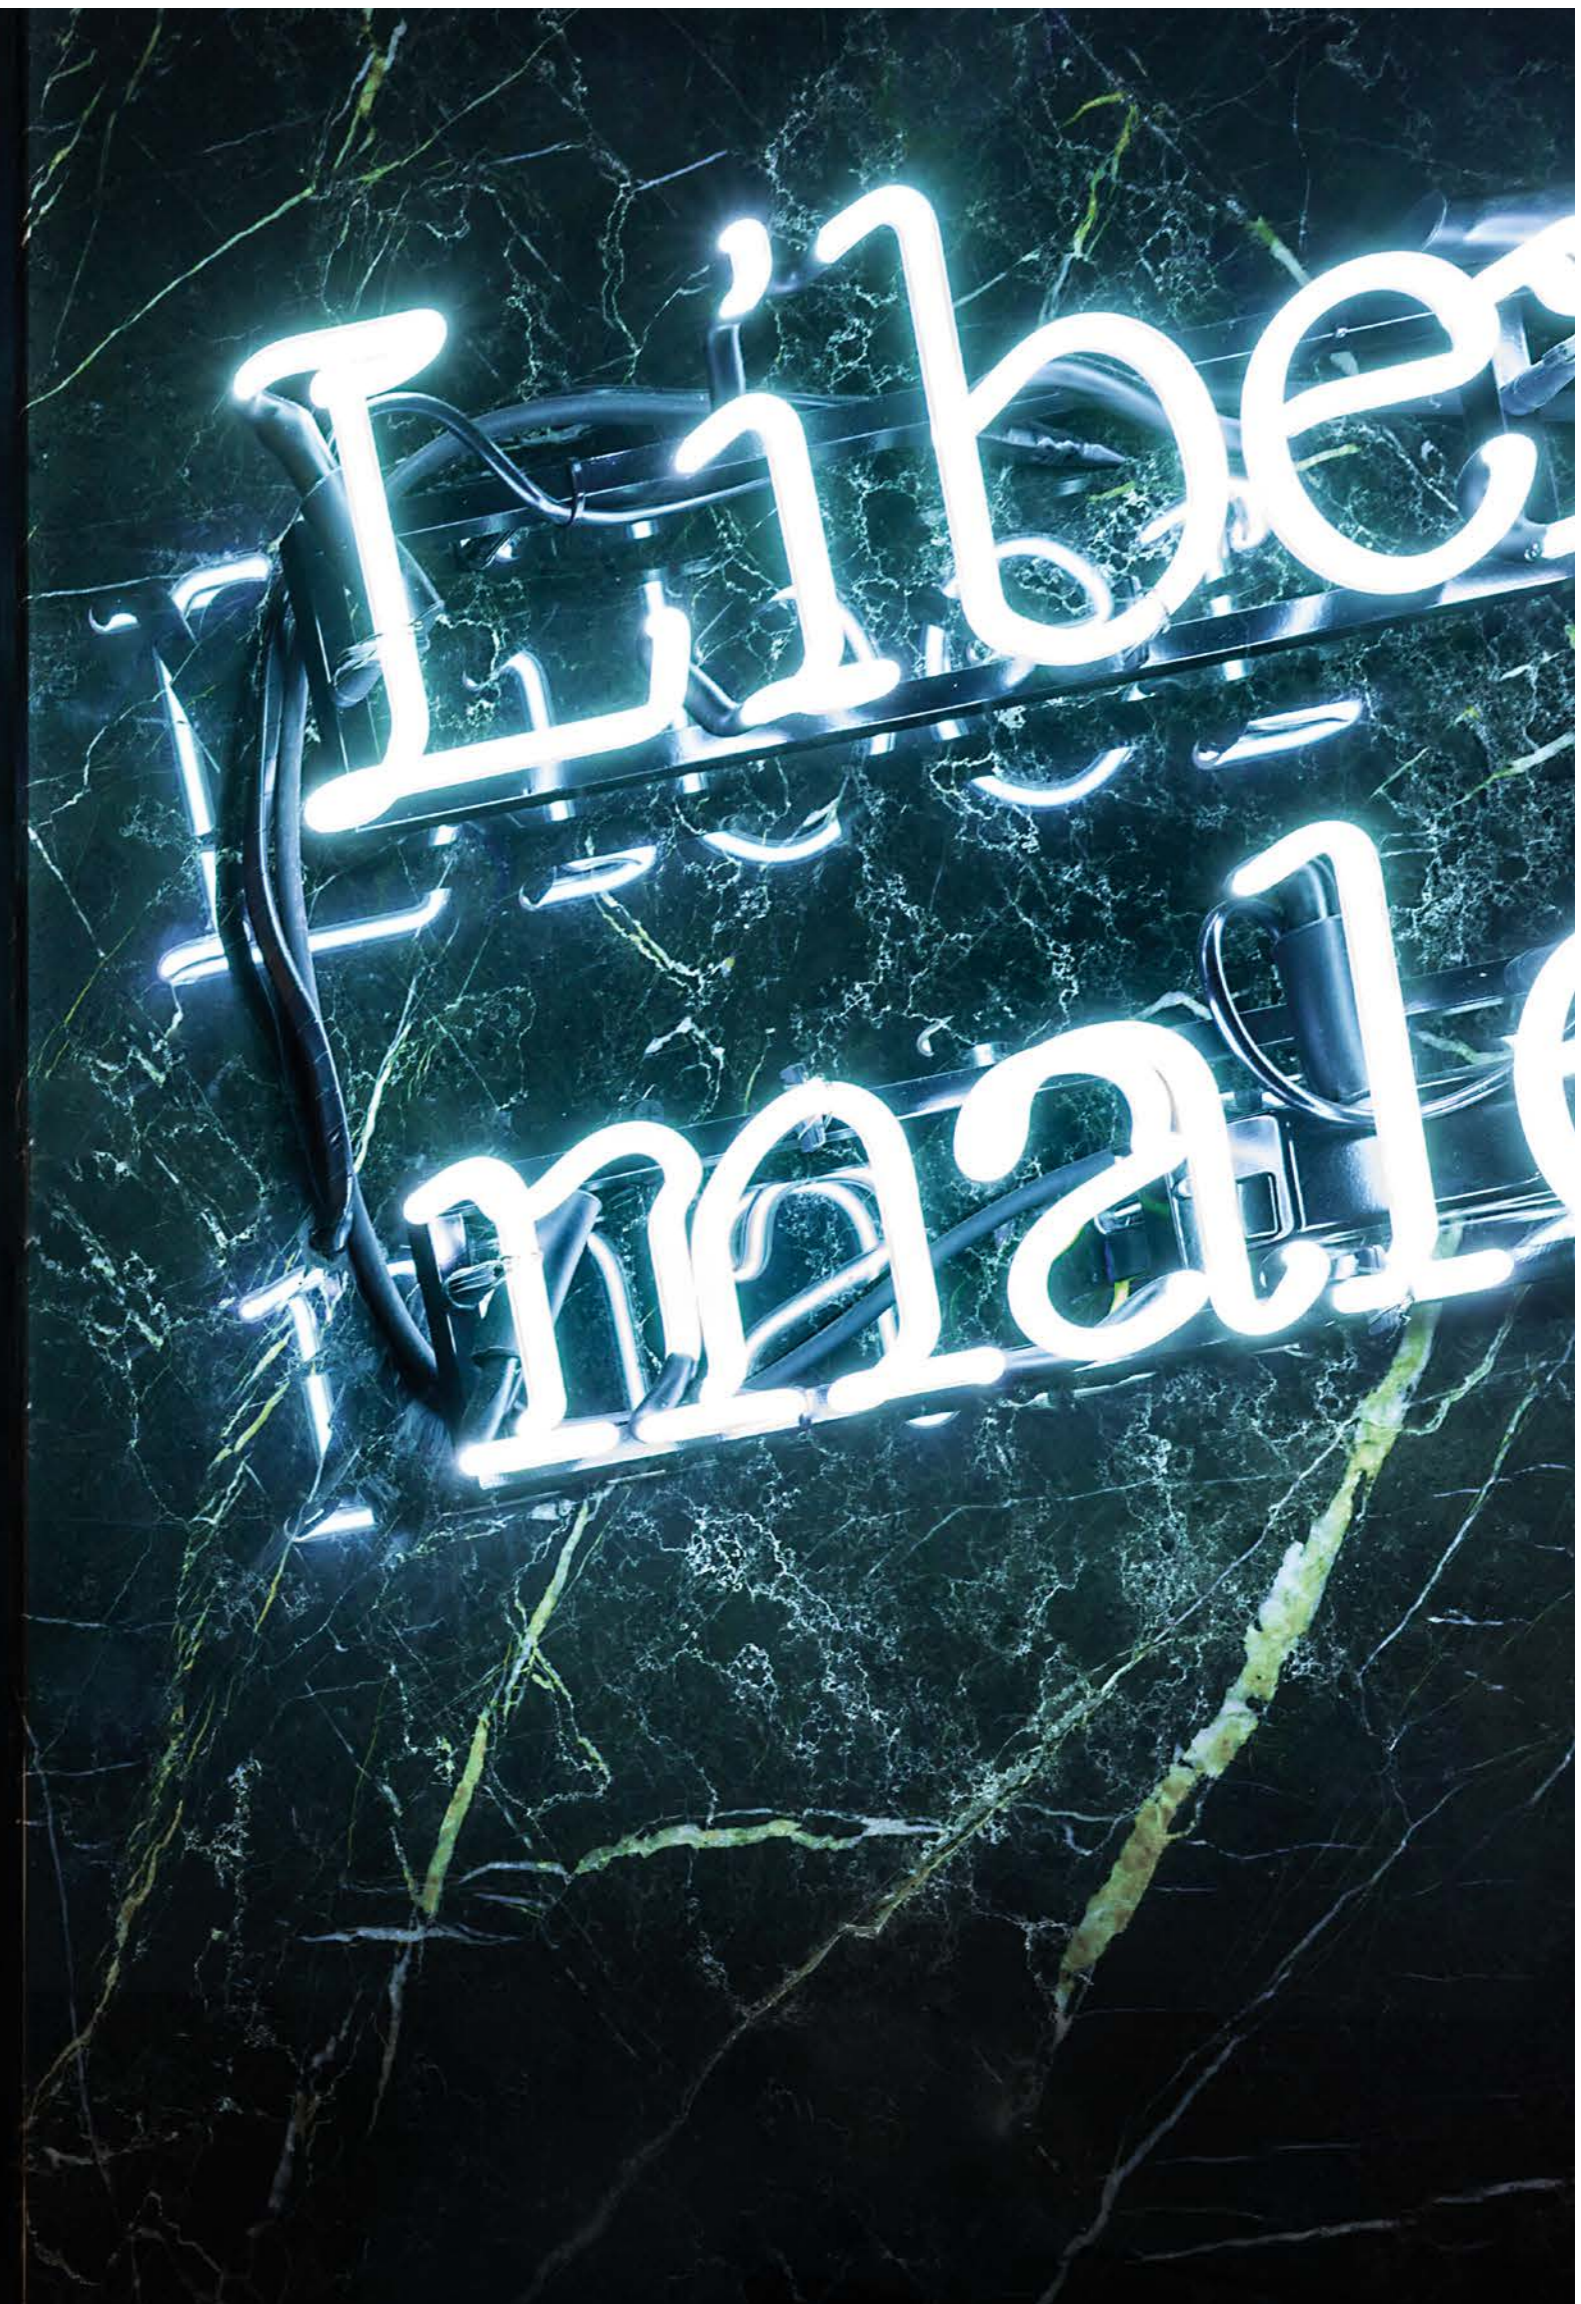

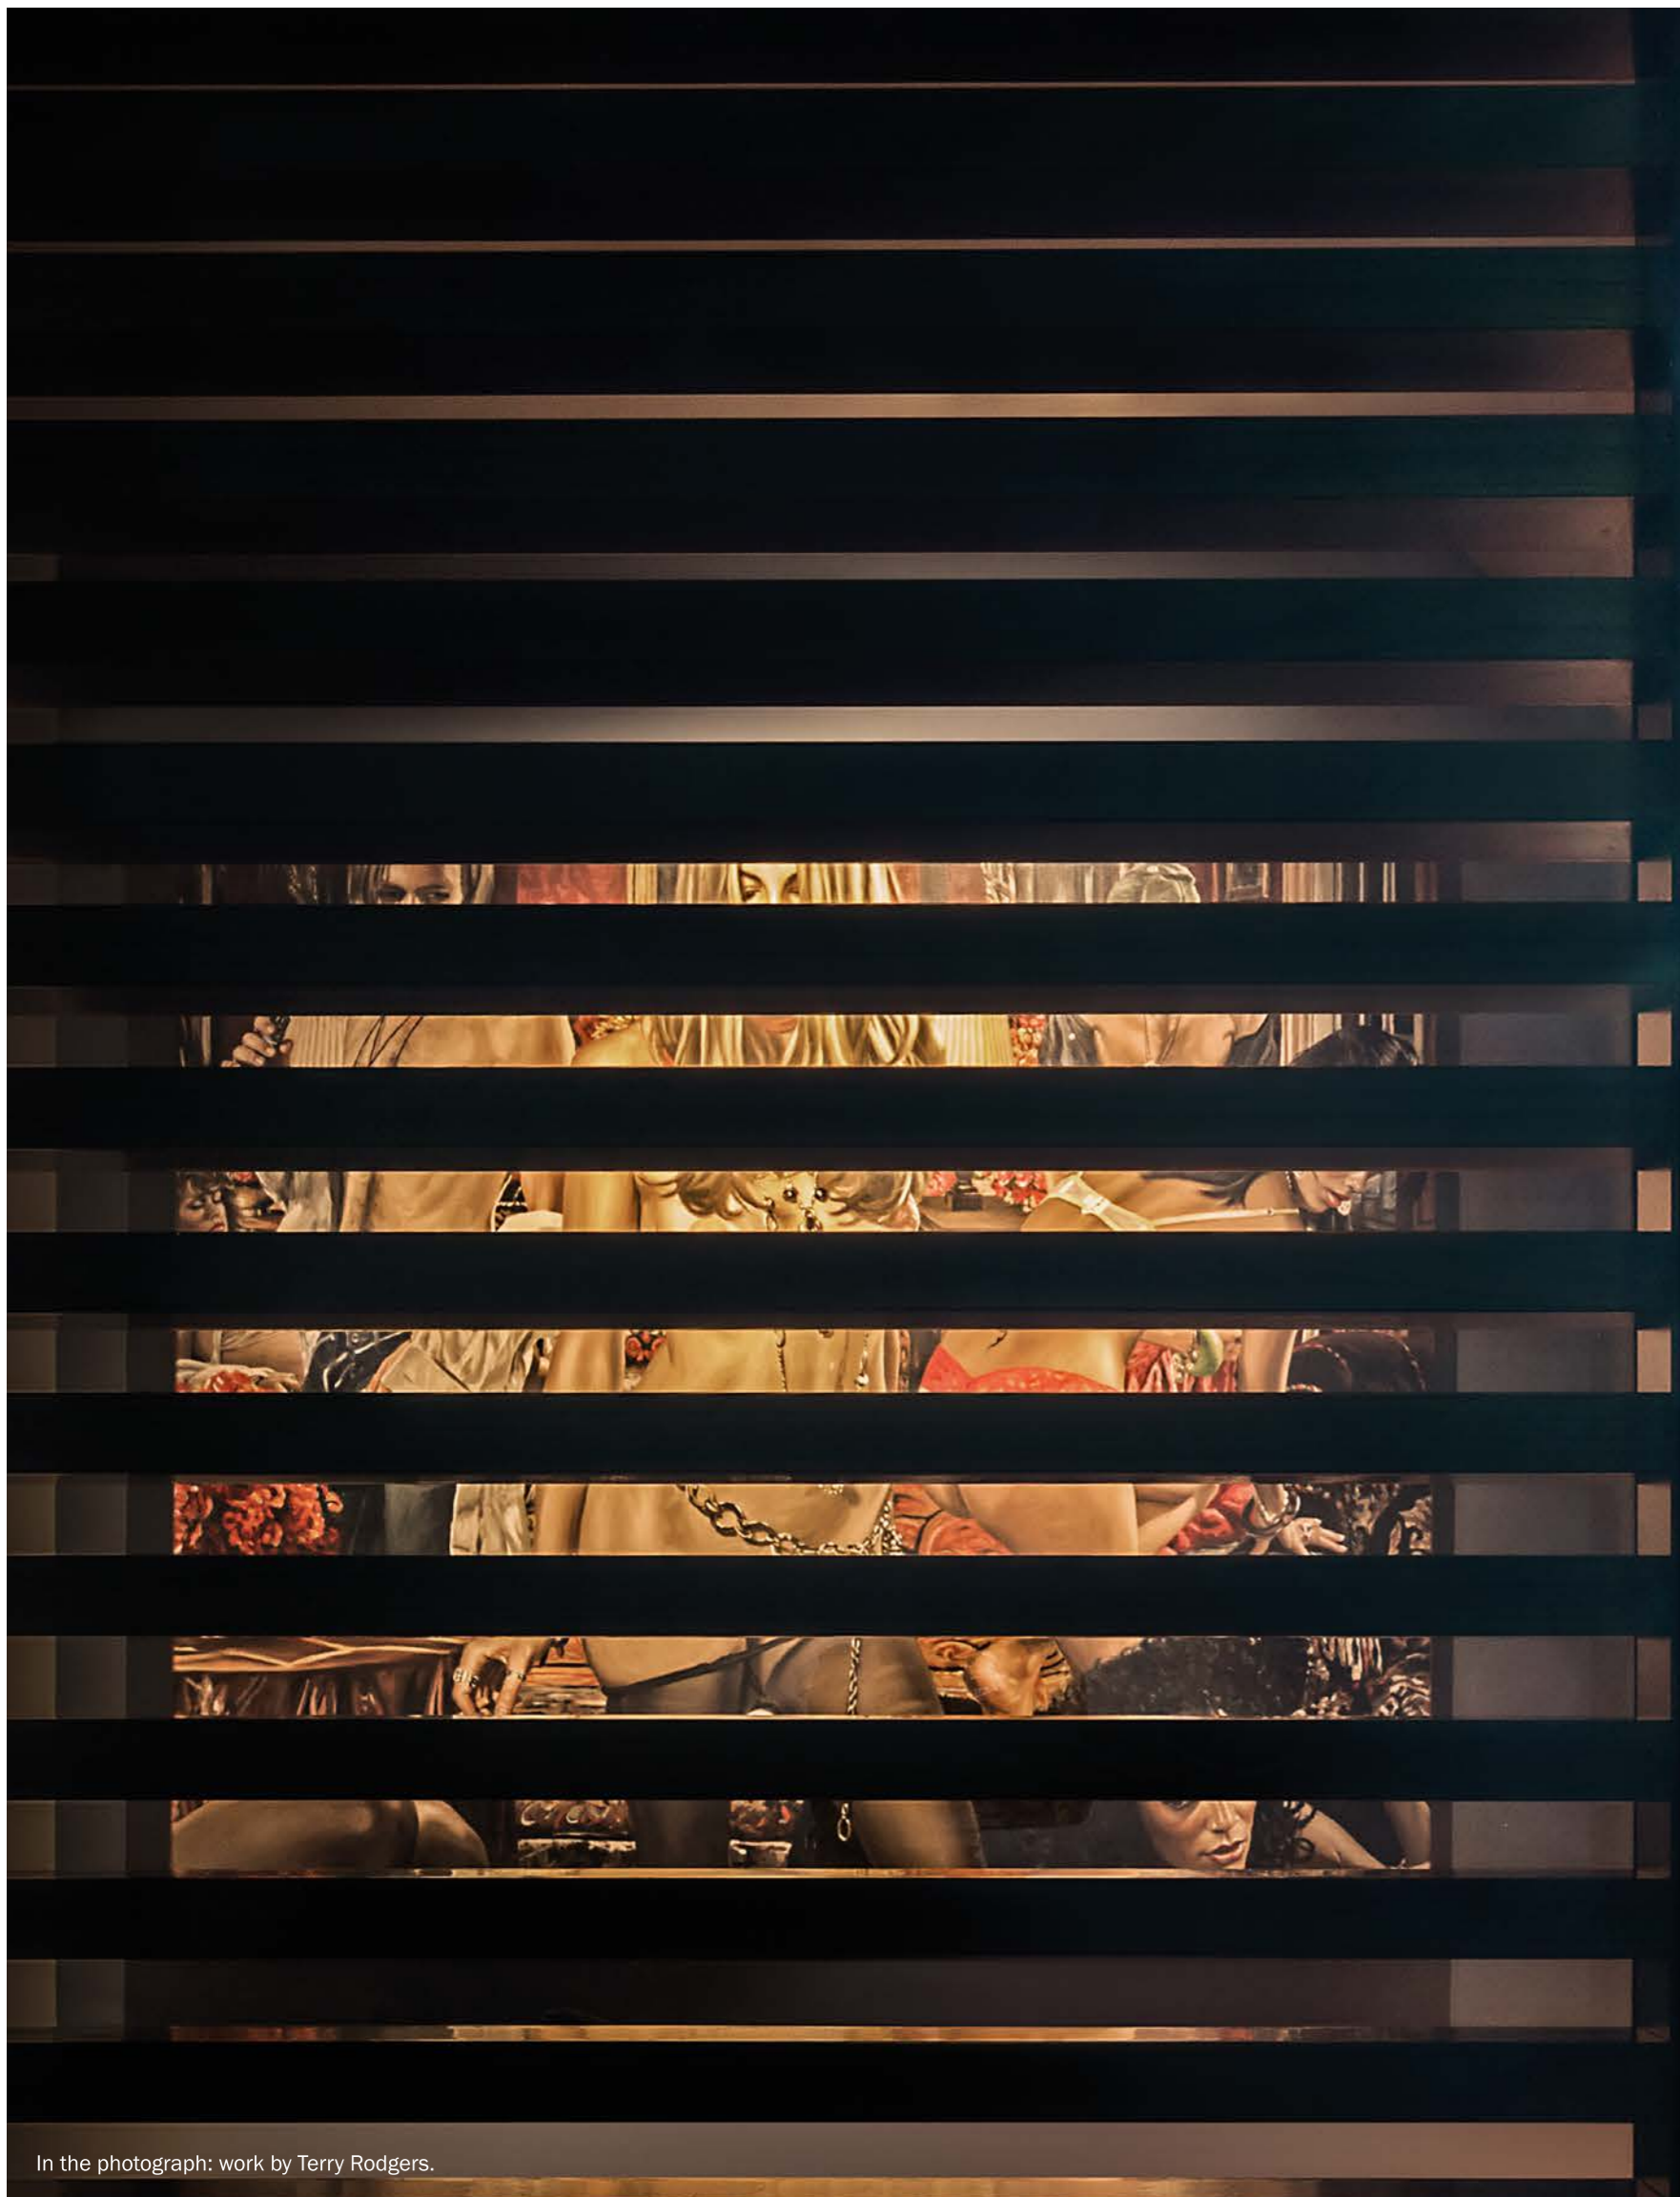

GLASS EVOLUTION

Creativity and aesthetics, the perfect mix for a design object able to transcend time and fashion. POM Glass dialogues artistically with other furnishing components, enhancing them wisely.

In the photograph: work by Terry Rodgers.

LIGHT WEAVES

Transparency and opacity, light and shadows games, essentiality and elegance in a single high-end product, full expression of style and Italian design.

Light & Transparency

“The sun is the light that illuminates every form of life.
As such it should also be considered in the design of
every house”

F. L. Wright

VISUAL OSMOSIS

The glass elegance solves the contemporary needs for space flexibility. POM Glass is a striking graphic wall that allows you to divide and connect different spaces.

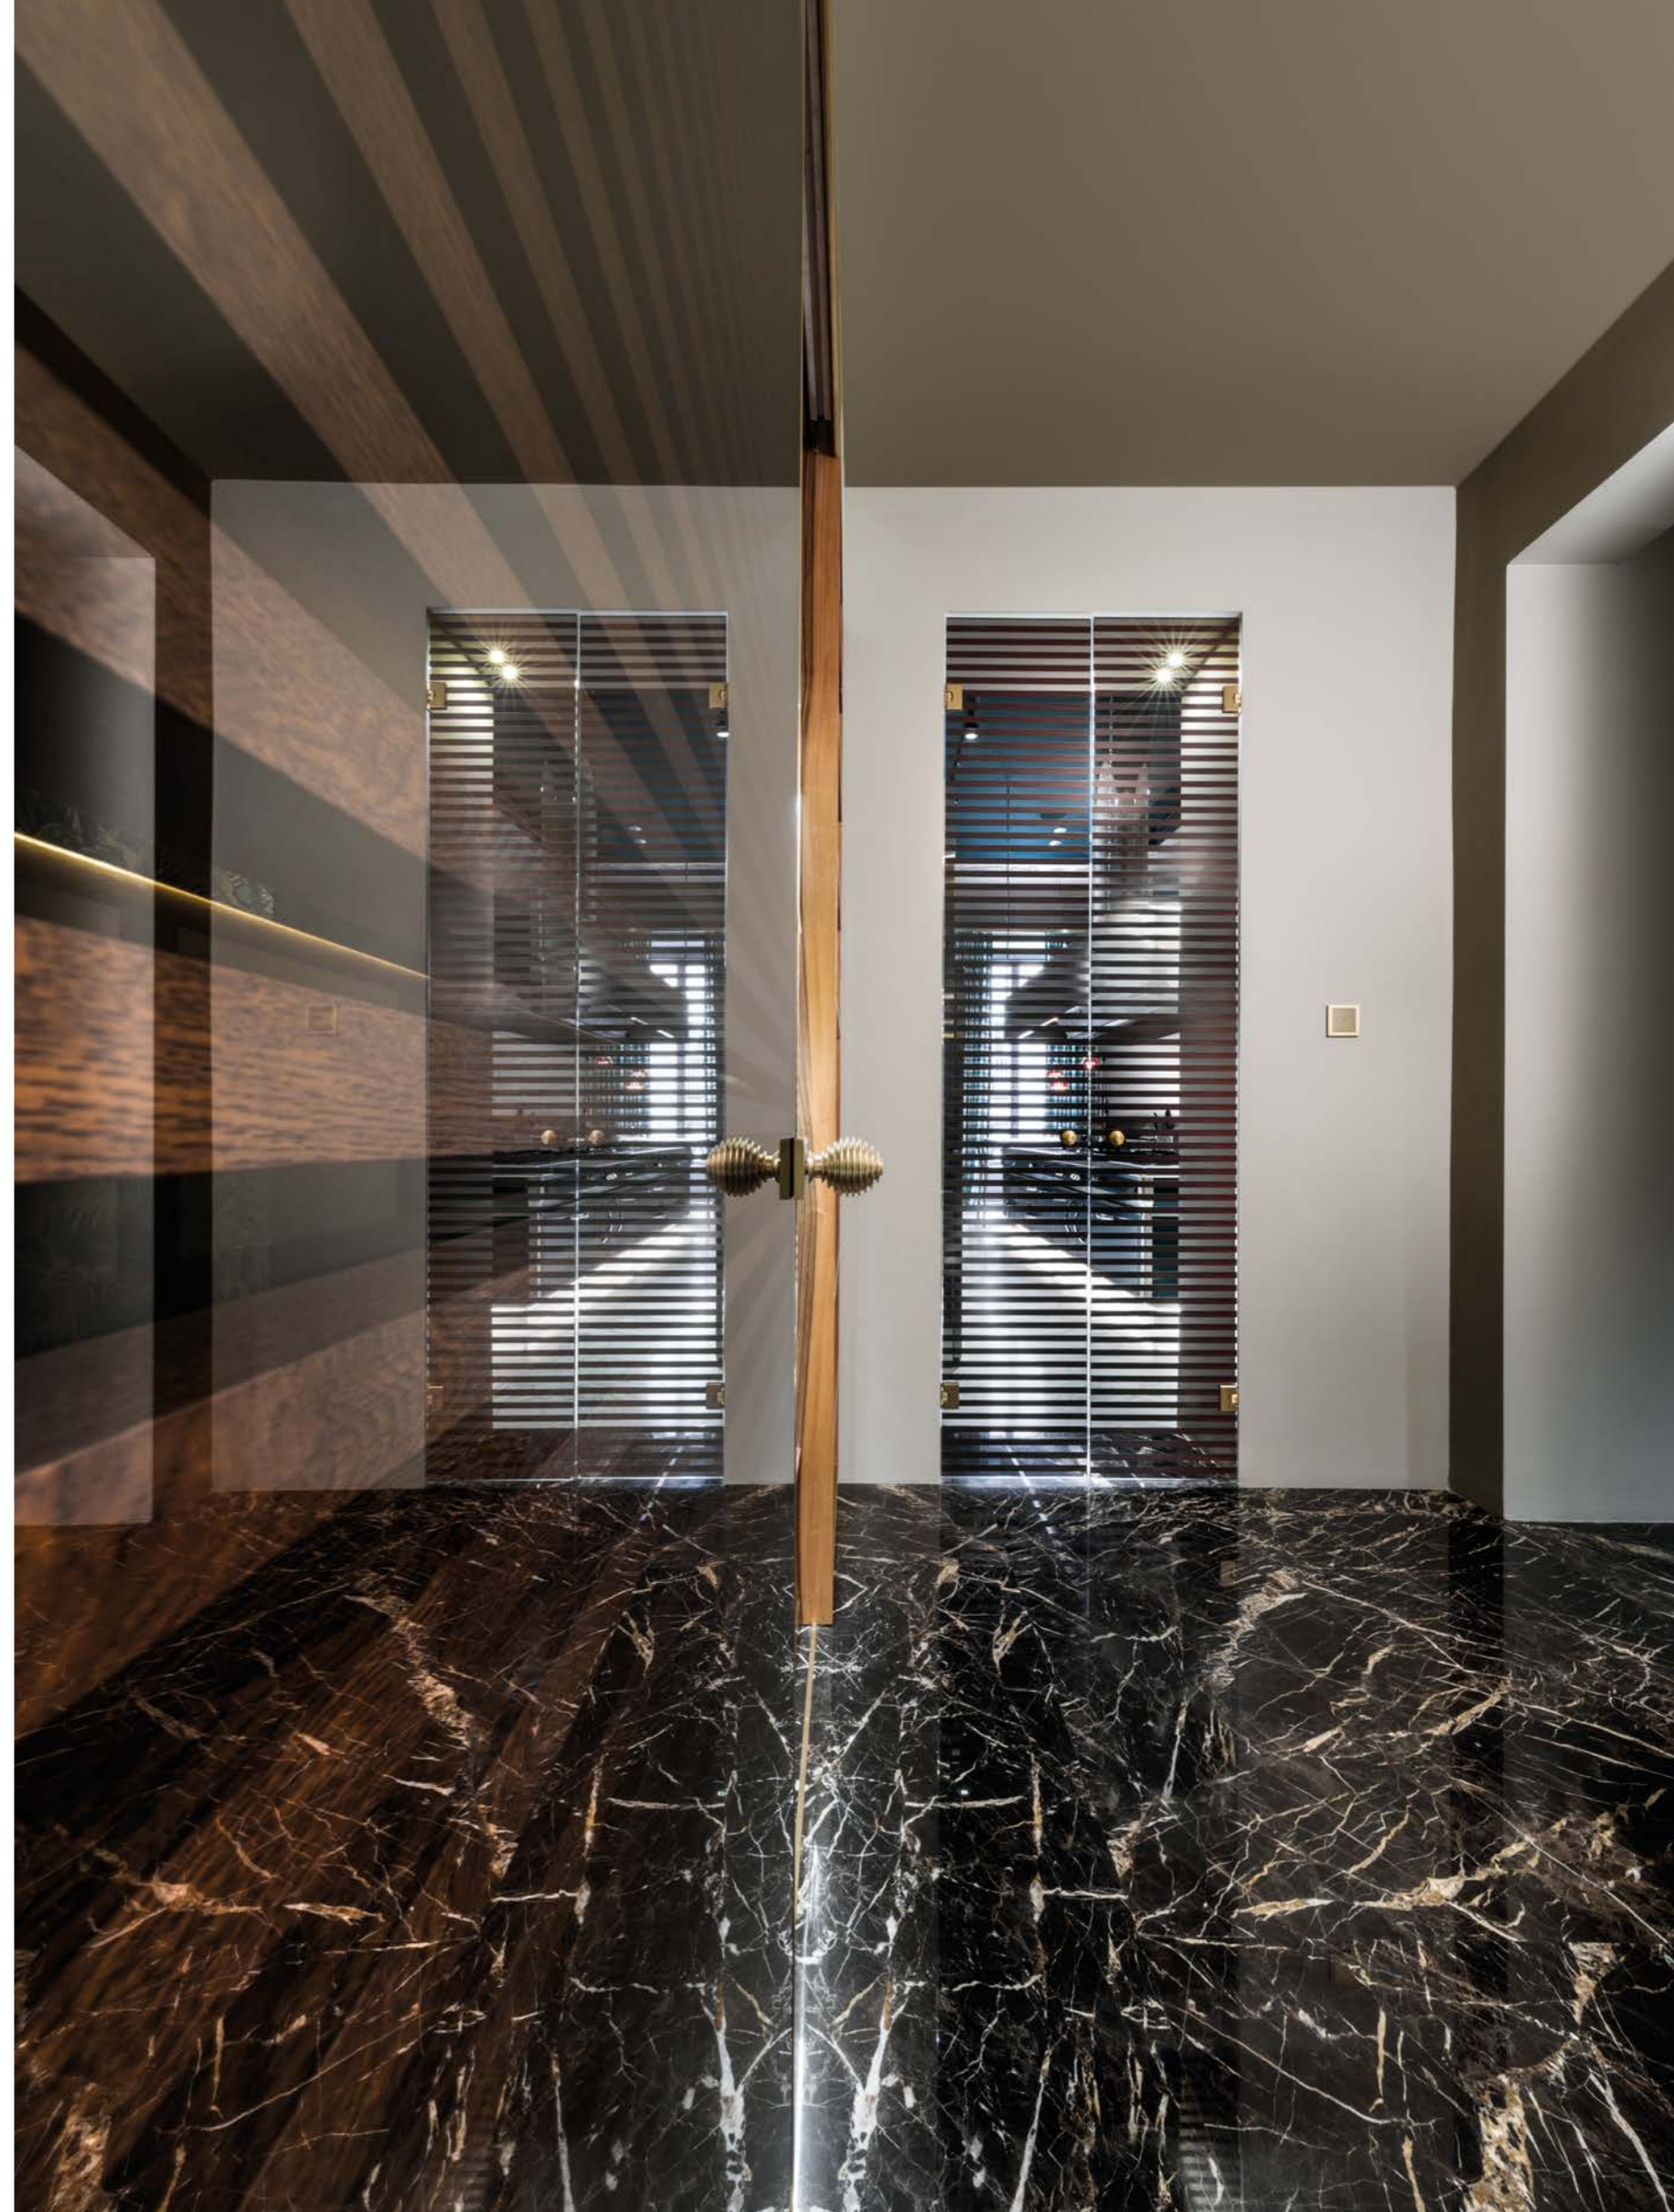

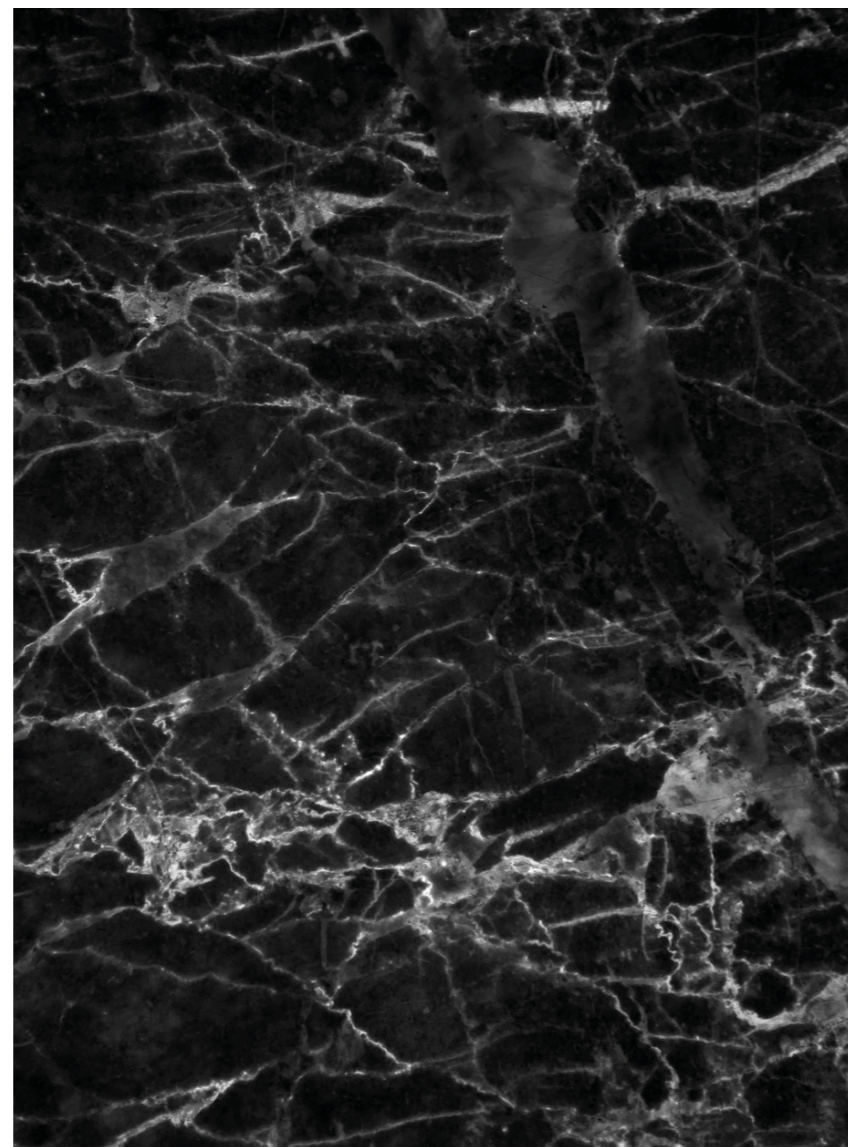

TURNING ON EMOTIONS

Light by its nature implies movement and change; the glass acts in some way as a prodigious filter that is able to tame and soften its cone (the light) allowing us to bend it according to our needs.

LIGHT GAMES

Glass opens the house to the surrounding landscape and with its refined transparency plays with natural light, allowing it to filter and illuminate the interiors.

Spaces

Like a piece of art, POM Glass enhance both indoor and outdoor spaces, giving them refined and luminous atmospheres.

REFLECTIONS OF INNOVATION

The glass industry is one of the most innovative in the world in terms of research and development. Buildings are constructed with traditional closures replaced by huge glass surfaces. On a structural level we are moving towards the dematerialization of the building, of which only the skeleton remains visible, wrapped in a transparent veil.

NOT JUST AESTHETICS

Glass influences modern architectural solutions. It has become the material of choice for interiors and outdoors in contemporary architecture. POM Glass meets the most common needs, such as safety and thermo-acoustic performance.
